

Object Summery Sheet 2000.109.002

IDENTIFIER:

2000.109.002 (Physical Object)

NAME:

Bucksaw

DATE CREATED:

DESCRIPTION:

turn buckle for adjusting double brace cross piece.

BUCK SAW

The buck saw is an early American saw. It is a frame type saw and operates on the principal of the bow. That is, the blade was stretched taut between two arms by a twisted cord (or by a rod and a screw). The saw could easily be collapsed by untwisting the cord. The buck saw is a bow frame type, but its blade is stationary and heavier, and a long handle has been added. To "buck" the logs was to saw them into proper lengths; hence, the buck saw is a woodsman's saw. This saw is hand made.

Our saw is different in one important way from the one shown in this picture. Can you spot the difference?

DIMENSIONS:

32.5 in L. x 0 in W. x 0 in H. x 0 in T. Weight: 0 lb Notes:32.5" blade
